1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) The invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 2, 4 and 12-14 are rejected under 35 U.S.C. 102(e) as being anticipated by Kuo (6,439,636). Kuo discloses the use of a seatback (72); a seat cushion (60); a four link mechanism four supporting the seat cushion; a drive unit (abstract) for driving the four link mechanism and moving the seat cushion between a seating position (figure 1) and a stowed position (figure 14); wherein when the seat cushion is moved between the seating position and the stowed position, support of the seat cushion is maintained by operation of the four link mechanism and drive unit; and a control unit (not shown) for operating the drive unit, wherein the drive unit includes a first drive unit for moving the seat cushion and a second drive unit for moving the seatback, and the first drive unit and the second drive unit are electrically connected to the control unit and operate in association with each other for simultaneously operating the seat cushion and the seat back. In regards to claim 4, the first drive unit is attached to one of the cushion side frame forming the seat cushion and the second drive unit is attached to one of the backside frames forming the seatback. mechanism supporting the seat cushion; a motor operated drive unit (abstract) for driving the link mechanism and moving the seat cushion between a seating position and a stowed position; a control unit for operating the motor operated drive unit. In regards to claim 13, further comprising the link mechanism is a four-link mechanism and includes a first link mechanism for moving the seat cushion and a second link mechanism for simultaneously moving the first link mechanism and the seatback. In regards to claim 14, the first drive unit is attached to one of plural cushion side frames forming the seat cushion and the second drive unit is attached to one of the plural backside frames forming the seatback.

Allowable Subject Matter

3. Claims 5-8 and 15-20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
